

Starting a Crypto Project?

Get Started With Prebuilt dApps

All of our products are white label and can be completely customized to suit your project.

About us

It didn't take us long before we realized that blockchain is undoubtedly the next step forward for the world after the internet. We founded BlockchainX as an initiative to help global adoption of blockchain, create innovative products that regular people can use, and help businesses truly leverage the power of decentralization. Today, we are a leading player in the industry with a worldwide clientele.

DeFi Crowdsale Platform

Now, why did you choose to decentralize your business? We're guessing that you like the independence, the freedom of open markets, and the opportunity to begin something groundbreaking without any shackles holding you back. Then, why should you depend on a third party to sell your tokens? Through our DeFi Crowdsale contract, you can run your token sale campaign without depending on or paying any intermediaries. Let your customers buy your tokens using any wallet of their choice and easily raise funds for your next crypto project.

Integrate any web3 wallet.

Sell your tokens through your own website.

Eliminate all intermediaries

Multichain Crypto Wallet

We know how careful you are when storing your cryptocurrencies. So, why not give your users the same level of care and offer them a way to safely store their tokens, with your own multi-coin crypto wallet? WinkPay is a hybrid crypto wallet platform that can be customized to handle both crypto and fiat currencies.

Integrate any blockchain

Non-custodial & decentralized

Completely white-label solution

Token Migration Platform

In the unforgiving market, even a small mistake can take your project tumbling down. Hacks and exploits are no walk in the park either. With our token migration platform, you can easily upgrade your tokens. Your users can connect their web3 wallets directly to your website and swap their old tokens for the upgrade, trustlessly.

Use any web3 wallet

Smart contract-based migration

Customizable UI

Token Bridge Platform

Building cross-chain crypto tokens used to be extremely hard and only left to the bigger players in the business. But your business is not built for yesterday, it's built for tomorrow. Now, you too can easily make your token cross-chain with our Token Bridge Platform. Your users can send tokens between networks easily and efficiently by connecting their web3 wallets.

Easily switch between networks

Integrate directly to your website

Customizable UI

Decentralized Exchange

Trading platforms continue to be the largest grossing businesses in crypto. But you need an entire team to manage a full-scale centralized exchange. However, you can still make comprehensive revenue and run a global trading platform in a matter of days.

A trustless DeFi trading platform

Consistent revenue from trading fees

A hassle-free user interface

Staking Platform

It's not just you, almost everyone is disappointed in central banks. There's too much red tape, not everyone can access it, and you're not going to get much in return if you only have a few hundred to spare. Our staking platform is a prebuilt smart contract with a customizable UI where your users can easily deposit their crypto and earn passive income.

Custom UI

Complete staking/farming smart contract

Optional DEX integration

NFT Marketplace

Many people think that NFTs are just for digital artists, but there is a whole lot more value to the space. NFTs leverage the power of blockchain to create an ecosystem where assets such as Art, Music, Movies, Real Estate, Collectibles, and even identity can be efficiently tracked and the ownership recorded on the blockchain. Through an NFT Marketplace, you can allow your users to sell, buy, and monetize content without paying commissions to intermediaries.

DeFi Lending Platform

Allow your users to get instant loans through collateral, and earn interest on their stagnant crypto.

Crowdfunding Platform

Raise funds for a cause you believe in through our crypto-enabled crowdfunding platform.

Blockchain-Powered Food Delivery App

Begin an online food delivery startup, with the world's first blockchain-powered food delivery platform.

OTC Exchange Platform

Let your users buy and sell cryptocurrencies through your own centralized OTC exchange.
