

Your ideas create tomorrow's reality. We just code it.

We deliver custom enterprise and public blockchain solutions for startups and businesses, streamlining your processes and ensuring maximum security.

Who we are

We are an industry-leading blockchain development company, with a team of 60+ skilled developers, certified blockchain architects, specialist consultants, and experienced creative professionals.

Why collaborate with us?

If you can think of it, we can code it. We help entrepreneurs and businesses create innovative blockchain solutions, and our skilled team of blockchain developers and experienced blockchain architects is capable of delivering corporate-grade, scalable decentralized applications and networks that streamline your processes.

Token Development

The road to your decentralized business starts with a token. Creating a robust smart contract free of any vulnerabilities requires experts. Our team of industry-leading developers is well-equipped and trained to handle complex, as well as, simple projects.

Blockchain Consulting

On every project, we assign dedicated consultants specializing in blockchain. Our consultants will guide you through the entire process of the project, from developing the initial idea, to planning the development, to launching it into the market.

Decentralized Applications (dApps)

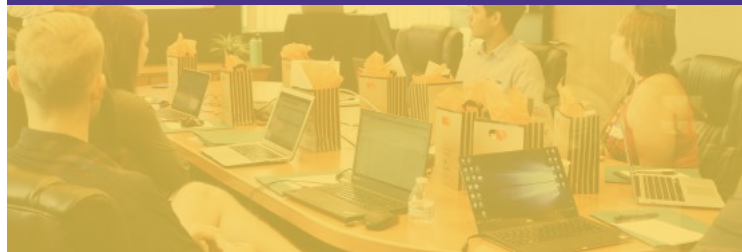

Blockchain dApps for enterprise help streamline your business processes, ensure complete data security, and enforces trust through smart contracts. We work with industry-leading blockchain technologies to maximize your efficiency and minimize downtimes.

Smart Contract Auditing

When you have a business that caters to an audience, there is absolutely no room for error. We offer a smart contract audit service led by our team of experienced blockchain security professionals and expert smart contract developers.

Not sure how to start? This is our quick-start guide to crypto.

1. Create a crypto token

Plan A. Basic token contract - With this plan you get a simple token, you can choose the token supply, decimals, and token standard.

Plan B. Medium token contract - This plan allows you to create a simple token with features such as Burn & Mint.

Plan C. Advanced token contract - If you're looking to create a token such as safemoon, with redistribution (reflection) & transaction tax, this is the plan for you.

Plan D. Custom token contract - If you have a complex project that needs a token with custom features, this is the plan for you.

2. Create a Landing Page

Your landing page is like your business card, where users can see what the project and they can also download & read the white paper.

Type A - Template

Type B - Custom Designed

3. Tokenomics Analysis & Planning

Our blockchain consultant and tokenomics specialist will work closely with you, and will develop a plan that includes how your tokens will function inside your platform and in the market.

4. White Paper Development

You tell us your idea, our technical writer will do the rest.

Type A - On Gitbooks

Type B - Custom Designs

5. Setup an ICO or Crowdsale

Manual dashboard - Track buy requests & KYC and then send tokens outside the platform.

Semi-automatic - Track buy requests & KYC and then send the tokens directly from inside the platform.

DeFi Smart contract-based - Users connect their MetaMask wallets and buy tokens trustlessly.

6. Market Listings

List your token on CoinMarketCap & CoinGecko

7. Explorer Listing

Listing your tokens on blockchain explorers like Etherscan and Bscscan.

8. DEX Listing Assistance

We do the calculations and guide you through it.

9. Token contract Auditing

Our team of blockchain security experts and smart contract developers audit your smart contracts and provide a detailed report.

10. Centralized Exchange Listing Assistance

We connect you with popular centralized exchanges that we have partnered with, and help you get your tokens listed with good offers. We do not charge for this service, the payments go directly to the centralized exchange company.

11. Platform Development

This is where we develop your entire platform. We assign a team to your project, send you weekly reports, and guide you through the entire process.

We also provide dedicated blockchain consulting and project management services
